

# **Evergreen Budgeting: A Personal Budgeting Application**

---

**Honours Individual Project Presentation**

Kirsty Balfour

Supervisor: Dr Sofiat Olaosebikan

March 2025

# Motivation & Goals of the Project

## Motivation

- Budgeting is a fundamental practice that allows personal goals to be met
- Helps maintain financial stability, reduce stress and improves financial literacy
- Financial literacy often overlooked in education
- Technology can help provide intuitive tools
- Current solutions are either overwhelming or too rigid

## Goals

- Develop a mobile-friendly personal budgeting app
- Allow users to:
  - Track, log, edit and delete their spending, income and savings
  - Set and monitor a category-based monthly budget
  - Define savings goals
  - Generate reports on their financial activity

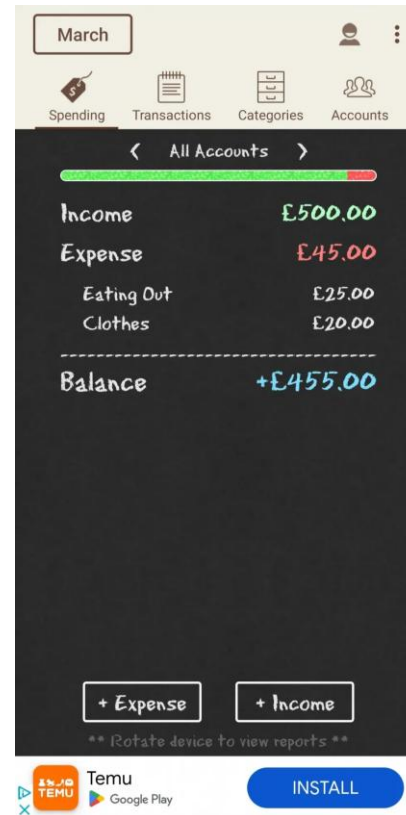

# Existing App Comparison

## GoodBudget

ENVELOPES	TRANSACTIONS	ACCOUNTS	REPORTS
Last Backup: 2m ago		Total: 297.08	
Monthly		288.75	
Groceries		203.75	240.00
Gas		100.00	100.00
Eating Out		-15.00	50.00
Every Year		8.33	
Savings		8.33	100.00
Goal		0.00	
Date Nights		0.00	20.00
Unallocated		0.00	
[Available]		0.00	

## Spending Tracker

## Monefy

# Existing App Comparison

Snoop

PocketGuard

YNAB

Rocket Money

# Existing App Comparison

## Key Insights

- Manual-entry are simpler but lack insights
- Bank-integrated have more complex features but are often unreliable
- Bank-integrated apps often try and sell their own products
- Customisation and flexibility are favoured but often lacking
- Ease of use more important than number of features

## Gaps Identified

- Paywalls
- Lacking reporting and visualisation tools
- Limited savings goal tools
- Syncing and backup features often unavailable
- Limited reporting periods (e.g. weekly, monthly, etc)

# User Survey

---

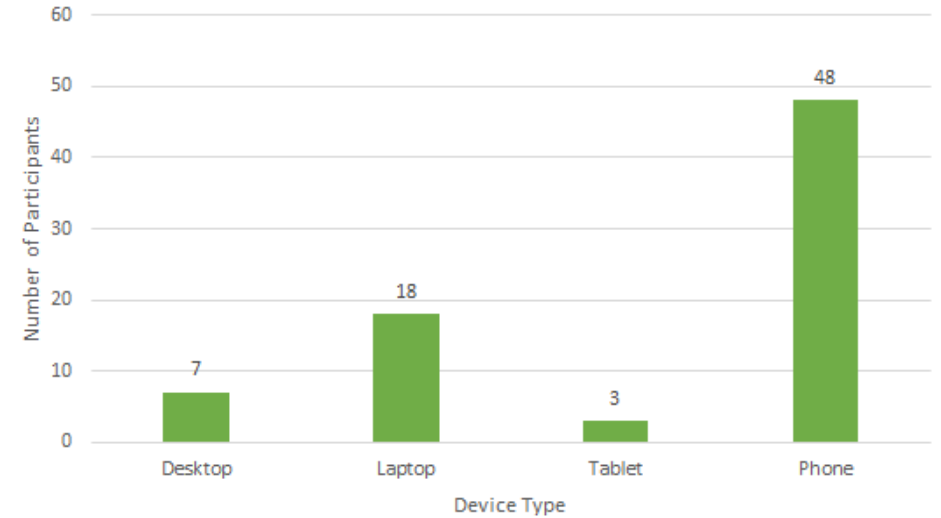

- Aimed to:
  - Gather data on how people budget and the tools they use to do so
  - Validate issues/wants found in the app comparison
  - Gain understanding of budgeting habits and features user like/want
- Gathered feedback from people who do and don't budget

# Results Relevant to App Design

- Received 51 responses
- App should be mobile friendly as 63% use their phone to manage their finances
- Weekly and monthly were the most popular budgeting periods
- Most common tool with spreadsheets, with only 11% currently using a budgeting app
  - 92% said they'd be willing to use one
- Most requested features were:
  - Spending/income tracking
  - Categorisation of expenses
  - Charts & reports
  - Savings goal tracking
- App should be simplistic, flexible and easy to use

What Devices Participants Use to Manage Their Finances

What methods do you currently use to manage your budget?

# MoSCoW Prioritisation

## Must Have

1. Secure login
2. Set a default currency
3. Log spending & income
4. View reports on financial activity
5. Set and track a budget based on spending categories
6. Clearly view when overspending has occurred
7. Mobile friendly with PWA capabilities

## Should Have

1. Assign currency to each transaction
2. Create custom categories
3. Create & track multiple bank accounts
4. Charts on spending by shop, payment method, etc
5. Reports on specific bank accounts
6. Additional savings goals formats

## Could Have

1. Automatic conversion between currency types
2. Variable payment amounts for repeated transactions
3. Additional reporting periods for charts
4. Export data in PDF or Excel
5. Tailored suggestions on where to reduce spending
6. Automatically calculate interest gained on bank accounts

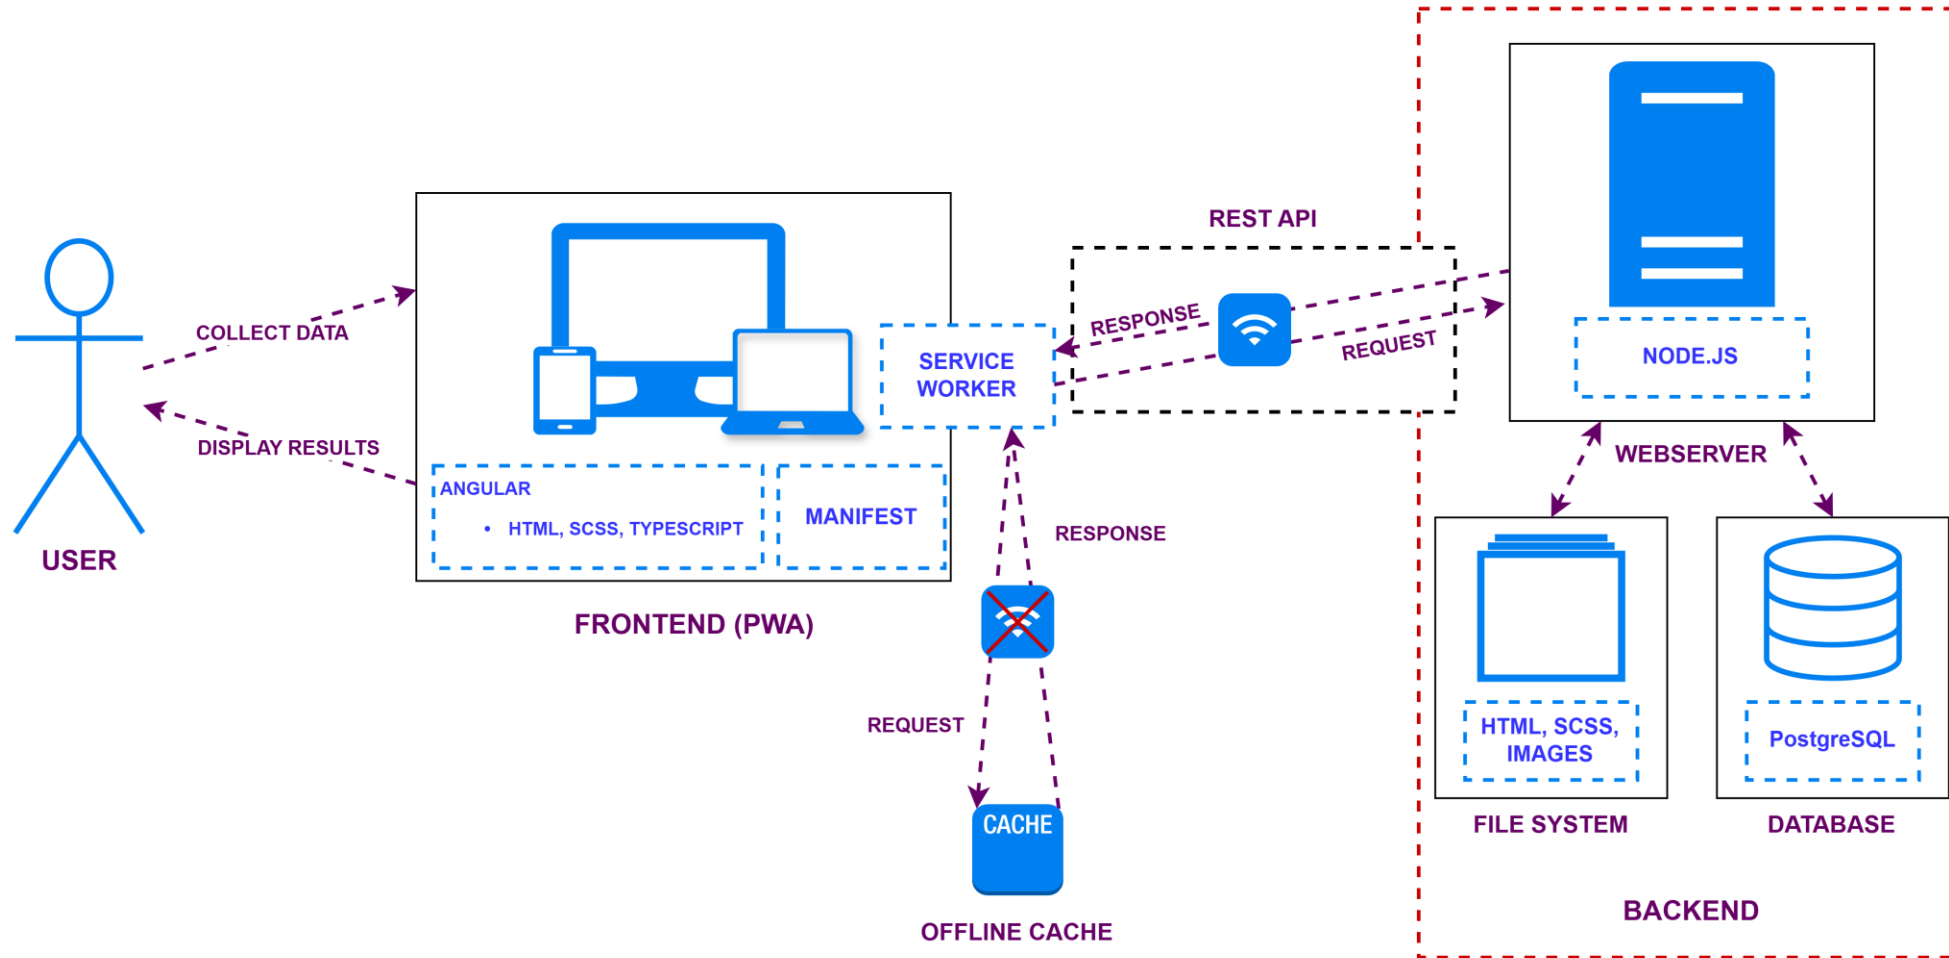

## Won't Have

1. Automatic categorisation of transactions
2. Bank account integration

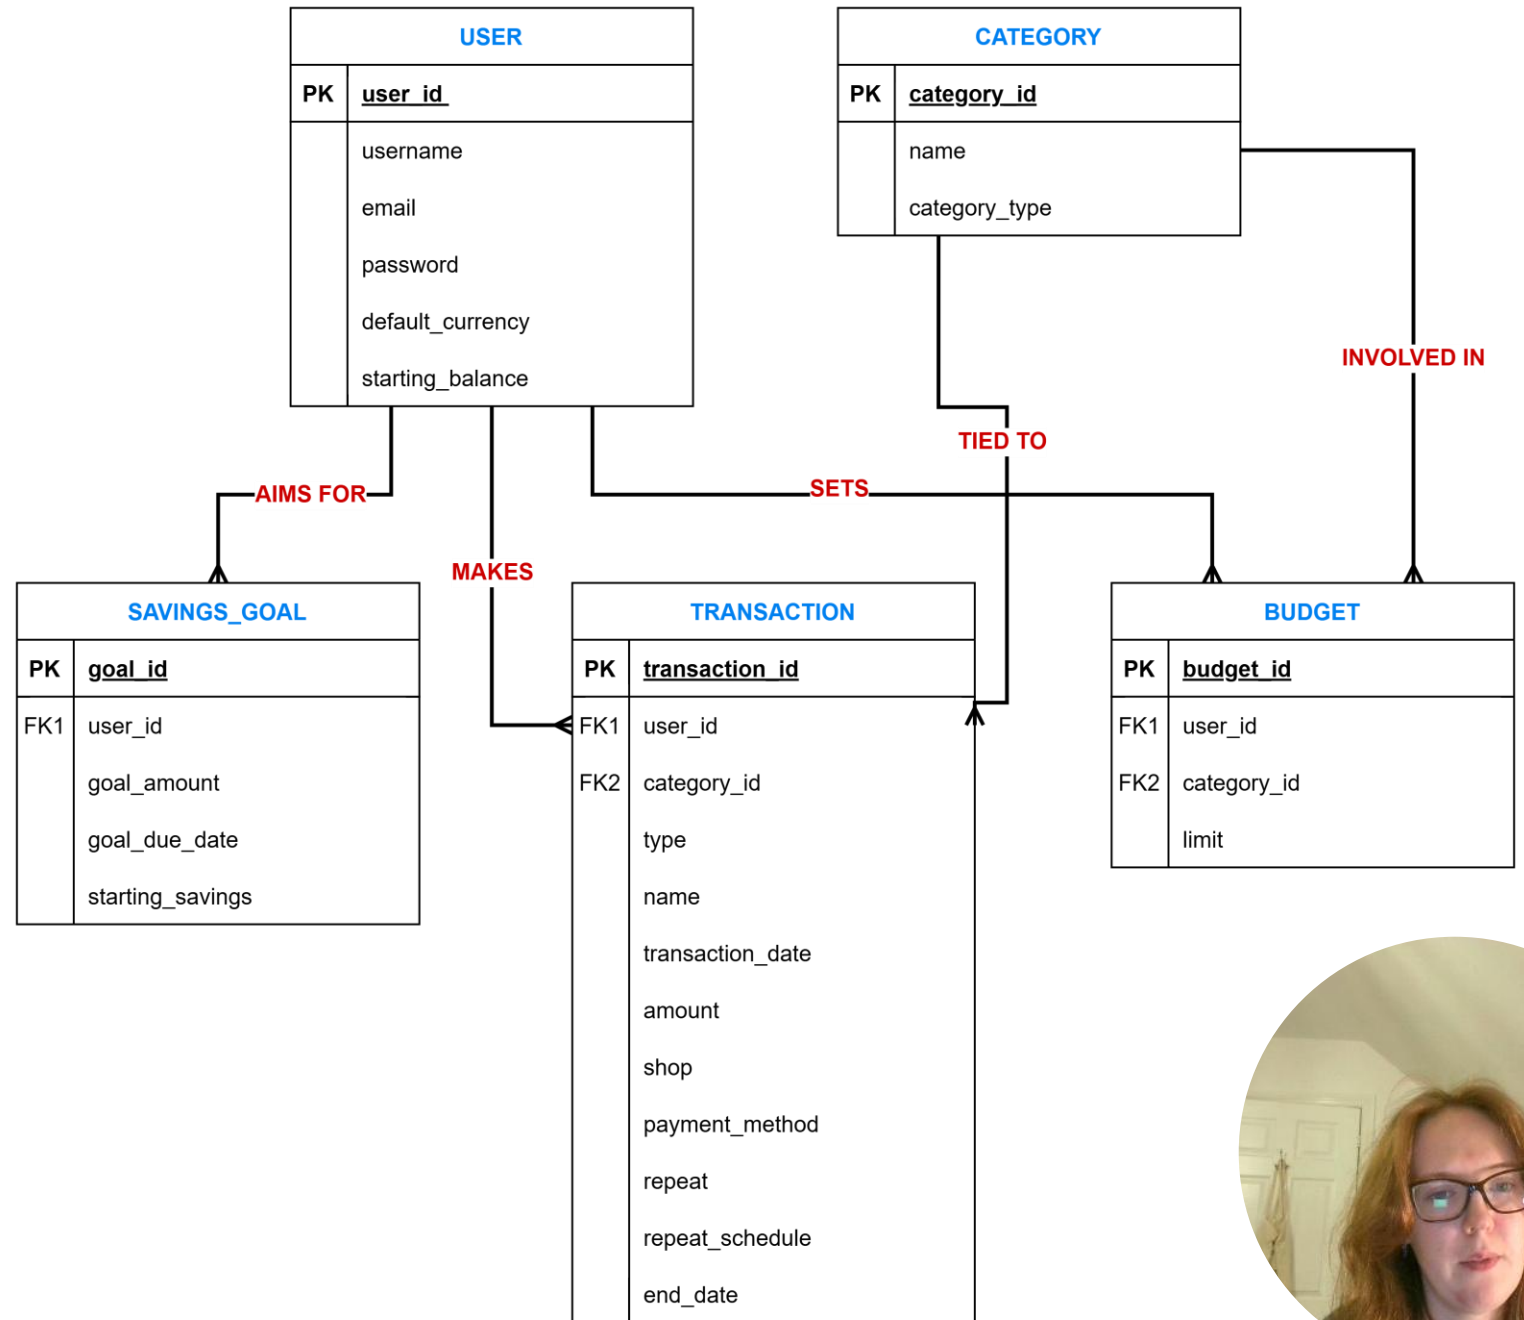

# Architecture Design

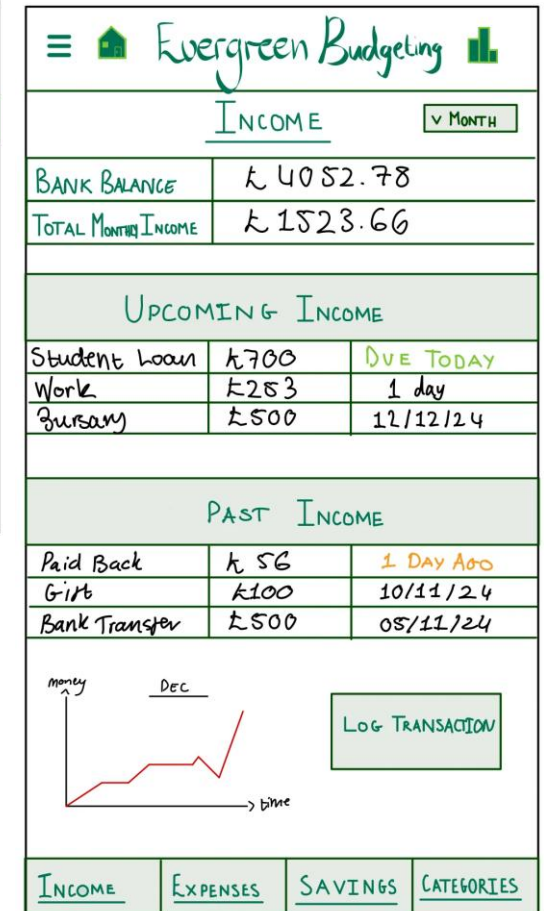

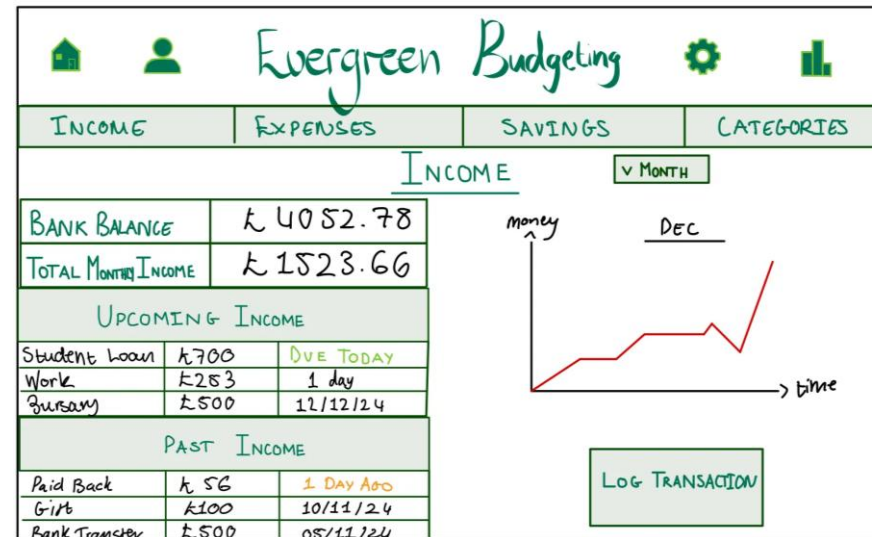

# MVP ER Diagram

# Wireframes

- Drawn for each main page
- Both a phone and desktop view
- Name was decided on as:
  - Ties into the “Money Tree” idea
  - Evergreen has connotations of longevity
  - Green commonly associated with money
- Nature palette and design for a calming feel
- Logo also designed

# Wireframes

Evergreen Budgeting

Budget Overview

Category	Limit	Amount Spent	Amount Left
Food	£60	£78	-£18
Clothes	£30	£15	£15
Eating Out	£40	£38	£2

Monthly Income & Outgoings

Income	£1050
Outgoings	£1203.58
Net Income	-£153.58

Upcoming Expenses

# Software Engineering Practices

## Version Control

- Git and GitHub
- Feature Branching
- Small and regular commits
- Each commit tied to a relevant issue

## Issue Management

- Milestones used for major features
- Kanban board: backlog, to do, in progress, done
- Time estimates: t-shirt sizes
- Priority labels: low, medium, high
- Closed either with a commit or a closing comment

## Continuous Deployment

- Master branch treated like production
- Pushes to master automatically deployed to the hosted application
- Frontend hosted using Firebase
- Server hosted using Vercel
- Database hosted using Supabase

[Home](#)[Transactions](#)[Budget](#)[Reports](#)[→ Log In](#)

## Sign In

New to Evergreen? [Register Here!](#)

# Security

## SQL Injection

- An attack that imbeds malicious SQL queries through form inputs or URL parameters
- Parameterised queries used throughout to sanitise inputs

## Authentication

- JSON Web Tokens (JWTs) are used to restrict access to the app
- Created at login and expire after an hour
- Can't access the server or database without a valid JWT
- Will be immediately logged out if a valid JWT isn't found

## Passwords

- Passwords are hashed with a salt
- Plaintext passwords are never stored
- Password comparison on login is done in the database

## CORS

- Cross-Origin Resource Sharing (CORS)
- Determines what domains can access the server
- Only allows access to the hosted frontend when in production
- Localhost is only allowed when in development or test mode
- All traffic is served over HTTPS

# Testing

- Unit tests done for the frontend and server
  - Both exceed the industry standard of 80% coverage
  - Each Angular component and service is covered by tests
  - Each file in the server is covered
- User testing was conducted using the evaluation participants to perform tasks and ensure all outputs and interactions behaved as expected
- Storage capabilities of the database tested
- Manual system testing was also conducted using generated mock data

# Evaluation

---

## Aims

- Assess whether the application meets the MVP requirements
- Determine whether the application is:
  - Easy to use
  - Mobile-friendly
  - Intuitive
- Identify areas for improvement
- Test the system through a number of structured tasks to observe if the system responds as expected

## Methodology

- Task-based evaluation
- Monitored and un-monitored participants
- Asked questions on:
  - Demographic information
  - If they managed to successfully complete the tasks
  - Satisfaction with the features
  - What they would change
- Post-task questions focused on usability, pain points and overall experience

# Main Results

- 20 participants, 11 supervised and 9 unsupervised
- All tasks were successfully completed, with only 2 bugs being identified, which were fixed promptly
- The app was reported to be:
  - Intuitive and user-friendly
  - Clean design and strong visualisation
- 55% of participants stated they would switch to using the app over their current method, with multiple inquiring when they could start using it
- Issues identified:
  - Savings being under Transactions
  - Flag icon for adding a savings goal
  - Tying transactions to goals
  - Date filtering
  - Mobile-usability issues around table displays and touch-screen features

Would this app replace your current budgeting method?

What version of the app was preferred

# MVP Requirements Evaluation

Requirement	Met?
Secure Login	✓
Default Currency	✓
Log spending & Income	✓
View Reports on Financial Activity	✓
Set & Track Budget	✓
Clear Overspending Indication	✗
Mobile Friendly with PWA Capabilities	✗
Easy to Use	✓
Intuitive	✓

# Future Work

## Mobile Usability

- Change table displays on mobile to contain less info
- Have rows expand when clicked

## Reporting & Customisation

- Allow historical reports to be viewed
- Additional reports such as breakdowns per shop, etc

## Custom Categories & Multiple Bank Accounts

- Allow users to create their own categories
- Allow multiple bank accounts to be created and tracked

## Linking Savings to Goals

- Allow individual savings transactions to be tied to specific goals
- Allow percentage of bank accounts to be tied to goals

## Bank Integration

- Integrate optional bank links so the app will work with or without this functionality

# Thank You for Listening
